Please note: The colours of the product illustrated in this brochure are as accurate as the photographic reproduction and printing processes allow. Also, the appearance of the product as shown may differ slightly from the actual product. Consequently, we strongly recommend you choose the final product based on an actual sample rather than the photographs contained in this brochure.

FAQ'S

www.polyroche.com

- **WHAT IS THE PRODUCT MADE OF?**

High-density polyurethane. It's the same material that Disney uses to produce their synthetic rock formations. Polyurethane was developed in the 1930's and is used to produce everything from car parts to roller blade wheels.

- **HOW DO YOU GET THE REAL STONE LOOK?**

We use high quality molds made from the best of real stones available.

- **DOES THE PRODUCT EMIT ANY TOXIC FUMES?**

The product emits no toxic fumes and is 100% inert. You can eat it if your teeth are strong enough. It's considered a "built green" product. Even in a fire the smoke it produces is less toxic than burning wood.

- **HOW DOES THE PRODUCT HOLD UP?**

It's an extremely durable product. The color and surface is very UV stable, exterior interior applications will maintain their look indefinitely. It has higher impact resistance than real stone and is very difficult to fracture.

- **HOW DIFFICULT IS IT TO INSTALL?**

It's a very "user friendly" product and is quite simple to install using woodworking tools and screws. A part can typically be installed in only a few minutes.

- **IS THE PRODUCT FIREPROOF?**

Our products respect class 1 fire retardent specifications for siding materials and so are fire retardent.

- **IS THE PRODUCT WATERPROOF?**

Yes, our products are closed cell content meaning they do not absorb moisture. They do meet the requirements as a vapor barrier and can be applied below soil grade. For more answers to the performance of this incredible product please contact Polyroche.

For more answers to the performance of this incredible product please contact Polyroche inc.
